VTX: A-SERIES

For Product demos and enquiries write to us at HPro.APAC@harman.com
or contact your authorized country partner

Both the VTX B18 and VTX A8 adopt the signature VTX A Series full-face powder- and zinc-coated grille design, which protects components from extreme conditions and contributes to a high Ingress Protection rating (IP55); grilles can be finished in a variety of colors to suit fixed installations.

Gary Goh, Deputy MD, E&E with Ramesh Jayaraman, VP & GM HARMAN Professional Solutions, APAC.

The VTX B18 and VTX A8, together with A12 and A12W loudspeakers, Crown i-Tech HD amplifiers and JBL Performance Manager Software, give audio professionals a complete toolset for designing the optimal sound system for any scale rental, performing arts or fixed install application.

The little details in relation to ensuring a lighter and smaller footprint when transporting for tours and the patented JBL rigging mechanism and redesigned suspension system to ensure ease of deployment as well as the smart packing of the rollable trays to save space caught the attention of the guests.

Sound Engineer, Jeyaraj D.A. comments, “The sound and the compact size is good. The technology behind the speakers and the design is impressive. The speakers are portable and from what I can see the set-up is easy which I feel will be especially useful for the AV guys.”

The launch in Singapore was held at the Capitol Theatre and saw more than a 150 professionals listen to the system. The Malaysia launch was held at the Sunway Resort Hotel & Spa Grand Ballroom and was attended by over 100 industry professionals. Both the VTX A8 and B18 are now available with immediate effect for both countries.

“HARMAN Professional Audio Brands and Solutions are well established for their technological superiority and world class quality and E&E is pleased to offer the latest product from iconic JBL brand to our customers in Singapore.” said Gary Goh, Deputy Managing Director, Electronics & Engineering Pte Ltd. “ This product meets the diverse sound reinforcement needs of our Singapore and Malaysia customers ranging from production companies, rental houses, theatres and houses of worship and we expect JBL VTX A8 to be a game changer in the fixed installation markets.”
